

FireLine™ 17 WP (oxytetracycline)

FireLine™

FireLine A Proven Performer against Fire Blight

When risk of Fire Blight threatens your apple or pear orchard, turn to a veteran you can count on – FireLine from AgroSource. FireLine is a superior formulation bactericide/fungicide that sets a new standard for quality and performance. FireLine is the product of choice for management of Fire Blight in apple and pear orchards where streptomycin resistance may be present.

**FireLine – from AgroSource – a proven performer
you can count on in your battle against Fire Blight.**

FireLine is also registered for use against Bacterial Spot in peaches and nectarines. See label for details.

Why FireLine™ 17WP?

Feature	Benefit
❖ History of strong performance	❖ Reliability you can count on
❖ Superior formulation	❖ Ease of handling, mixing, spray application
❖ Excellent stability profile	❖ Convenient inventory management
❖ Unique mode of action (FRAC 41)	❖ Effective resistance management tool, especially when tank mixed or rotated with FireWall 17WP (streptomycin, FRAC 25)
❖ Can integrate biologicals	❖ Enhanced performance possibilities in resistance management programs
❖ Organic designation	❖ May be used in organic apple and pear production
❖ 'Caution' signal word	❖ Provides wider margin of safety

Note: FireLine is recommended to be applied in advance of a potential Fire Blight infection period. For optimum performance of FireLine on apples and pears, use a Fire Blight risk management model to help determine Fire Blight potential in your orchard/location and best application timings for FireLine.

*Your new standard for
Fire Blight control*
